

Dataset Description:

Images:

The dataset is organized into three main subsets:

Train: This subset contains an expansive collection of 25,470 images meticulously curated for training purposes.

Validation (Val): With 1,000 images, the "val" subset enables thorough model performance evaluation during development.

Test: The "test" subset comprises 400 images specifically reserved for post-training model evaluation.

Labels:

Corresponding to the image subsets, the "Labels" directory holds YOLO annotation files in "train," "val," and "test" subdirectories. These annotation files provide precise information about license plate locations within the images, including class labels, bounding box coordinates, and object confidence scores.
